

MOVENTOR

MAKES EVERY RUNWAY SAFER

GLOBAL RUNWAY REPORTER

GLOBAL RUNWAY REPORTER

Global Runway Reporter is a modern software designed for making runway inspection effortless and efficient. The software digitalizes runway reporting to increase safety and create savings. Get alerted when inspection is timely. Publish runway condition reports easily directly from the inspection vehicle with Mobile software. Explore with limitless visual analytics. Customize analyzing tools and perform analyses in just a few clicks. From the biggest airports to the smallest ones uses Global Runway Reporter to report runway conditions and generate consistent SNOWTAM and ATIS syntax.

The three modules cover the whole process of Runway Reporting and makes it simple and safe. Alerter improves cost efficiency and increases safety due to better timing of efforts and gives alerts when Aeroplane RWYCC differ from current runway conditions. The mobile software gives guidance for the user for assessment and visualizes reported conditions in real time. The web software allows history browsing and running unlimited analysis from the database.
